

ACCESS B3 OILFIELD WATER INTELLIGENCE MORE SEAMLESSLY THAN EVER THROUGH OUR API

HIGHLIGHTS

- Easiest, fastest way for developers to access B3 oilfield water intelligence datasets
- Import data directly into internal applications or data warehouse for unique analysis
- Data is updated daily (at a minimum)

TECHNICAL SPECS

- API: REST
- Authorization: OAuth2
- Formats: XML, JSON

B3 Direct Insight API provides seamless programmatic access to B3 database servers. Within minutes, you can import data directly into your data warehouse or internal applications for unique analysis. Use Direct Insight API to access proprietary data and industry leading information.

Easy Access to Various Datasets

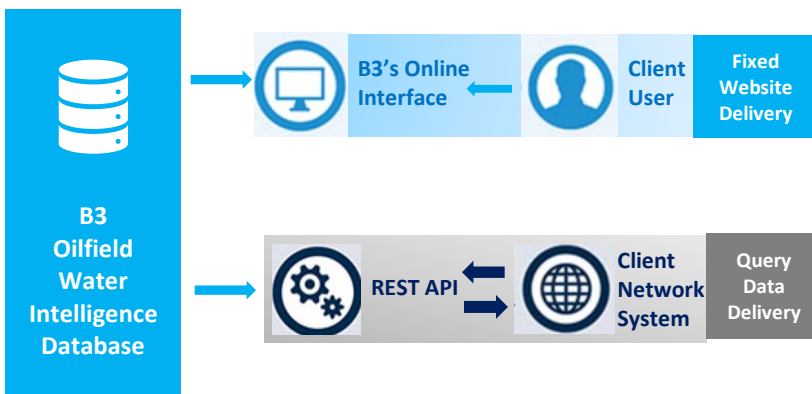

Tracking down the best data, connecting to those datasets, and then importing them back into your applications or internal warehouse used to be time-consuming process. Direct Insight API saves you hours of time by allowing you to connect directly to B3 servers. Import various datasets directly into your internal systems in a fraction of the time.

Constantly Updated Oilfield Water Intelligence Data

Direct Insight API will allow you to make critical decisions with speed and confidence knowing you are basing them on up-to-date oilfield water intelligence information that is automatically updated. The following Texas and New Mexico datasets are available now, with new datasets coming late 2018/early 2019:

TEXAS INJECTION AND DISPOSAL: 30,000+ disposal permits statewide, including over 2,300 new and pending permits updated weekly; monthly time series of injected pressures and volumes including up-to-date P-18 data.

NEW MEXICO DISPOSAL: Over 1,300 disposal wells statewide, including monthly time series of injected pressures and volumes.
